#### Explanation:

Documents 1-8 cited in the ISR, and document 9 newly cited in this written opinion, do not describe the subject matters of claims 1-49, and so the said subject matters appear to be novel.

Document 9 describes the compounds represented by the formula (2) of claim 1, and a method for manufacturing them wherein a substituent group in the seventh position of the quinolone ring is formed last of all. Documents 4-8 describe methods for manufacturing quinolonecarboxylic acid derivatives wherein a substituent in the seventh position is formed as in claim 1 and then a reaction to close the ring takes place, and describes that such methods have advantages of obtaining the targeted product with a higher quality and at a higher yield, and so on, and so it is not considered that adopting those methods to produce the compounds described in document 9, and producing intermediate products for those compounds, requires any particular creativity. Accordingly, the subject matters of claims 1-49 do not appear to involve an inventive step.
